

## How Could You Benefit From Dot NET Development

In this advancing IT sector and the growing popularity of software systems for various purposes, including aviation, hospitality, travel, customer relationship management, and business processes, increases the need for a developmental language that is not only robust but also scalable, flexible, yet and cross platform. This is where, **Dot NET Development** comes into existence.

The primary objective of this programming language is to build applications for web, desktop, as well as for mobiles. The platform created by Dot NET technology consists of Visual Studio IDE and is constructed on the CLR (Common Language Run-time). Apart from its huge class of libraries, it also support multilingual languages, like VB, C, C++ and, so on.

Today, more and more companies prefer web applications in order to expand their businesses. Also, this programming language provides developers a medium to build dynamic and creative web based applications with the layers of already existing codes and the reuse of codes. Microsoft Dot NET Platform is considered as an integral part of any application development for its several advantages.

Following are the benefits of **Dot NET Development**:

1. This is a platform independent language and assists in decreasing the quality of codes during developing web applications.
2. Microsoft's Dot Net is secure and safe as Windows configuration can be achieved in every application.
3. WYSIWYG (What You See Is What You Get) is Visual Studio's editing tool.
4. Drag and drop operations are provided for blueprints and server controls.
5. In Dot Net language HTML codes and the source codes are separated.
6. It is a server side technology.
7. Time and cost are saved, combined with the developing and conserving processes.
8. It is easy to develop applications and web portals based on databases. It facilitate the use of same portals and formats.
9. In this platform, you will also find Software interoperability.
10. It also includes crash safeguard and memory task facility, which further helps in recovering memory leaks that makes websites smoother and always available to visitors.
11. It also consist sufficient back-up of all your development.

Therefore, with all the above mentioned advantages, one can rightly say that **Dot NET Development** is the next generation platform, which is widely used by the companies all around the globe for both small and large enterprises. This has further resulted in the popularity of **Outsourcing Software Development** in a big way.
